This all important semi-annual information resource is your electronic guide to the world of shortwave radio listening.

Shortwave radio listeners are routinely entertained with unique perspectives to events, music, culture, history, and news from other countries that you won't see or hear on your local or national broadcast channels. Shortwave radio broadcast aren't restricted by country borders or oceans, and can propagate thousands of miles, reaching millions of listeners worldwide, in over 300 different languages and dialects. These worldwide transmissions are monitored on internationally assigned radio frequencies between 1700 kHz and 30 MHz.

There are even broadcasts from the dark side, transmitted from broadcasters known as clandestine or clanny stations. Clandestine broadcasters are wrapped in mystery and intrigue, and they usually exist to bring about some sort of political change to the country they are targeting. Programming may largely be half-truths or sometimes even outright lies, but it is essentially propaganda for their cause.

Listeners who live in the United States can easily hear shortwave broadcast stations from Australia, Canada, China, Cuba, Egypt, France, Germany, India, Iran, Japan, New Zealand, North/South Korea, Saudi Arabia, Taiwan, Turkey, United Kingdom, United States, Vietnam, and many other countries if you have an inexpensive shortwave radio receiver, and you know when and where to listen!

If you want to get in on the action, then this Amazon electronic book is your ticket to travel the world via radio. Also new in this edition is increased frequency and station coverage of longwave broadcasters, selected medium wave broadcast frequencies used by international broadcasters, and all known international standard time and frequency stations transmitting worldwide.

This new e-publication edition is a much expanded version of the English shortwave broadcast guide that was formerly published in the pages of the former Monitoring Times magazine for well over 20 years. This one of a kind e-book is published twice a year to correspond with shortwave station’s seasonal time and frequency changes.
